

TOP CONSIDERATIONS WHEN REPLACING YOUR PACS

Selecting a new PACS is akin to embarking on a long-term relationship - you will be interacting with your new system (and your vendor) every day for the foreseeable future.

Consider these six factors to ensure you select a system that will satisfy your current and future needs:

1. Functionality

Does the PACS offer all of the tools your team requires, without have an 'over-tooled' and cluttered UI?

3. Interoperability

Does the PACS support the latest industry standards and profiles, and provide APIs for advanced integrations?

5. Vendor Relationship

Does the vendor's approach to client engagement, support, and communication align with your expectations?

2. Workflow

Can the PACS adapt to the unique workflow needs of your clinical, technical, and operational staff?

4. Technological Foundation

Is the PACS built on an up-to-date technology platform that is scalable, performant, and secure; can easily adapt to changes in data or usage patterns; and provides robust monitoring and analytics?

6. Cost

Does the PACS fit within your budgetary structure and means, and do the projected capital and operational efficiencies to be gained justify the price tag?
